DESCRIBE THE PRESENT AND ORIGINAL (If known) PHYSICAL APPEARANCE

Official governmental architecture found its way to Raleigh in the form of the Second Empire style Federal Building which was designed and executed by the Office of the Supervising Architect of the Treasury Department, headed at that time by Alfred B. Mullett. Many of the original architectural elements have been retained throughout each of the three building stages and renovations. Begun in 1874, the original structure was a threestory granite-faced brick building with mansard roof. The three central bays of the east facade form a projecting pavilion accentuated by quoins which are repeated on the ends of the flanking three-bay wings. Each level is marked by a wide stringer treated as a continuous unpaneled pedestal. The upper moldings of the stringer are broken at each window to form a projecting sill supported by stylized brackets. At the base of the roof is a curiously fashioned entablature featuring a band of dentils punctuated by stylize consoles beneath the cornice. The consoles are unusual in that they extend to the base of the entablature and are therefore more elongated than the usual prototypes. The above-mentioned elements have been retained throughout the two later stages of construction.

As originally constructed the building was five bays deep and had an entrance in the center of each three-bay section of the east facade. In the wings the doorways had square transoms and were flanked by fluted Doric pilasters. The entrance in the pavilion and that in the center bay of the north facade were treated as full aedicules. An elaborate roof treatment emphasized the importance of the pavilion. A segmental pediment crowned the center window of the triple dormer which was flanked by restrained volutes. Tall chimneys featuring elaborate cornice caps rose in three stages from rusticated pedestals at either end of the pavilion. On the central bay of each wing was a single triangular pedimented dormer flanked by volutes like those of the pavilion.

A series of changes brought the Federal Building to its present form. The pavilion entrance on the east facade has been replaced by double doors behind four massive Tuscan columns set in antis forming a loggia. Cast iron candelabra flanking the entrance loggia also have been installed. Each has a spherical globe atop a reeded shaft, the foot of which is decorated with acanthus leaves resting on wide circular bases with paw feet.

About 1913 the sides were extended from five to nine bays, and another triple dormer was added. Unfortunately, the massive chimneys were removed from the east facade. At the same time a cortile and courtroom were constructed at the rear.

During the 1937-1938 construction phase, a third section of four bays was added to the west, bringing the Federal Building to its present depth of thirteen bays. Simple dormers, coordinated to the rhythm of the bays, replaced the more ornate ones. The interior was completely renovated with the possible exception of the courtroom ceiling which features a series of intersecting ribs forming a pattern of large rectangular and small square caissons ornamented with elaborate moldings, patera, and rosettes. In 1856 Congress appropriated \$50,000 for a "United States Court Room and Post Office in Raleigh, North Carolina." The site was not selected until August 7, 1860, when the United States of America paid Annie Lawrence \$27,700 for city lot 99, known as the "Lawrence Hotel lot," which measured 210 feet by 110 feet and was located on the southwest corner of Fayetteville and West Martin streets.

Alfred B. Mullett, who became Supervising Architect of the Treasury Department in 1865, continuously shelved the design for the Federal Building in Raleigh, contending the cost limit was inadequate even though the \$50,000 limit of 1856 had been raised to \$100,000 by 1872. In 1873 Congress raised the appropriation to \$200,000; designs were prepared during the spring of 1873.

On July 4, 1874, ceremonies were held for laying the cornerstone which contained a copper box filled with "a Postal Route Map, one set of U. S. coins of 1874, and the 1874 Blue Book, proof specimens of stamps and stamped envelopes, the Postmaster General's report, a copy of laws and regulations of the Post Office Department, the several Acts for the construction of the building, and several photographs including those of President Grant, Postmaster General Creswell, Secretary of the Treasury Bristow, and architect Mullett."

William A. Hearne, the Site Superintendent Architect, resigned on December 17, 1875, for political reasons. He was replaced by C. S. Harris who was removed in 1878 because of delays and overspending as the building neared completion. After Harris's dismissal, all payments were made by William W. Holden, Postmaster and Custodian of the Post Office. Changes in 1908, 1912, and 1938 almost doubled the size of the building.

The Federal Building is typical of the architectural style disseminated throughout the country in the late nineteenth century by the federal government. Despite remodeling and enlargements which have enabled it to remain useful as a post office to the present day, the building still has some of its original exterior features. In downtown Raleigh, it is one of the few structures that have survived which retain any scale, detail, and feeling of the past. Its juxtaposition to the new multi-story courthouse is in itself a study in the changing urban scene of the state and nation.
